# Client Example Protocol

The follow are the screen setting for the Protocol 5000, 880, 800, 787, 727, 465, 20 hertz

To Change the "Freq Rds" memory groups, you must have "Setup=1". Set the "Freq Rds' groups 1 through 7 and Setup=2, Setup=3, and Setup=5 screens to read as follows;

Setup=0 Freq Rds=1
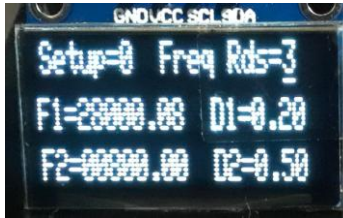

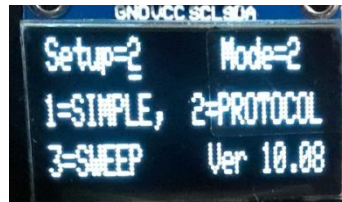

Setup=0 Freq Rds=6

Setup=0 Freq Rds=2

Setup=0 Freq Rds=7

Setup=0 Freq Rds=3

Setup=2

Setup=0 Freq Rds=4

Setup=3

Setup=0 Freq Rds=5

Setup=5

Client Example Protocol

If the above Telligent screens are set as pictured the stated protocol will have been loaded into the Telligent. If you do not know how to dial in these screen settings then you should watch the demonstration videos on the website.

"Setup=2" is the screen used to define the memory groups used in this Protocol. Those screen could of just as easily been stored in other memory group locations.

"Setup=3" is used to define where the frequencies are defined. In this example they are defined in memory groups 1 throuth 7.

"Setup=5" is used to define the run timings. In this example each frequency is run for 180 seconds and the total program time has been set for 21 minutes. These values can be changed to meet your timing requirements or needs.

These same settings can be set in the Spooky software and recorded as a PRESET, if you know how to build a PRESET? The major difference between using a Spooky in addition to the Telligent is that you will have to observe the Duty Cycle on channel 1. Insure it is not set higher than 10%. Additionally, you will have to isolate the two channels in the Spooky software which is another task beyond the scope of this Telligent PDF.

An explanation of the why channel 1 on the Telligent is set to 28000.08 hertz is simply that the Plasma ball delivers most of its power at and around 28 Khz. Additionally 28000.08 is both a number nine code and a health frequency. The "Number Nine Code" is another subject but if you are interested, you can view the following YouTube video. 28 Khz is the health frequency that is radiated at the top of the largest Bosnian Pyramid.

Number 9 Code;
